## Product Profile

ONYX – the robust, durable and ultra-strong multifilament thread made of polyamide 6.6.

Its excellent abrasion resistance and outstanding maximum tensile strength provide an even greater variety of ONYX applications, in addition to the large number of product and colour variations.

ONYX is mainly made for technical applications, for companies seeking an alternative to polyester multifilament threads.

ONYX not only offers the classical multifilament thread made of polyamide 6.6, but also a water repellent version WR in two thread sizes.

For the automotive industry, where polyamide 6.6 is a classic material, AMANN offers STRONG-FIL AMANN. You will find more information on this in our Service & Technik brochure Automotive (order no. 101350.)

### Applications:

#### ONYX 10

Coarse sewing thread for heavy fabrics and technical textiles.  
For ornamental seams in the shoe and upholstery industry.
