

PRESS RELEASE

Texprocess 2026: AMANN Group presents six new sewing and embroidery threads in Frankfurt

Texprocess Innovation Award for our sustainable product innovation, AeoniQ™ Fil

Bönnigheim, April 2026 – AMANN will be presenting its new look and six new product developments at Texprocess 2026 in Frankfurt.

From **21 to 24 April 2026**, AMANN will be showcasing new products in **Hall 8.0, Booth H47** that address specific requirements regarding circularity, seam quality, processability and visibility. The focus is on **AeoniQ™ Fil**, a biodegradable sewing and embroidery thread that has been recognised with the **Texprocess Innovation Award** in the **“Ecological Quality”** category.

AeoniQ™ Fil is made from renewable cellulosic fibres and is the first nature-based sewing and embroidery thread to come close to matching the performance of synthetic alternatives in terms of sewing performance and stretch. The sewing thread – developed in collaboration with the Portuguese-Swiss joint venture AeoniQ™ – supports monomaterial designs for circular concepts and other sustainable end-of-life options when processing cellulose-based fabrics.

Being awarded with the Texprocess Innovation Award 2026 highlights the product's relevance for circular textile solutions.

“With AeoniQ™ Fil, we are demonstrating how innovation and sustainability can be combined in a pioneering sewing thread. Winning the Texprocess Innovation Award is, for us, a strong endorsement of our commitment to developing textile solutions that create added value beyond the seam,” says Markus Nicolaus, CEO and Chairman of the Management Board of the AMANN Group.

Smart Stitch™ is also geared towards sustainability and pioneering eco-design solutions – a heat-soluble sewing thread designed to make textile recycling more efficient, developed by Resortecs (www.resortecs.com) and now produced by AMANN.

The innovation portfolio is complemented by further high-performance new releases:

Sera & Isa Reflect, retroreflective sewing and embroidery threads for enhanced visibility; **Saba evo**, a premium sewing thread for particularly uniform seams in high-quality applications; and **Isacord Recycled UV**, an embroidery thread with exceptional UV resistance for durable and sustainable embroidery in outdoor applications. **Waterfil** is another addition to the range: a water-soluble sewing thread designed for temporary seams.

Together, these innovations underline AMANN's commitment to combining technological excellence, the highest standards of processing quality and responsible product development.

Behind the new look lies the **new brand campaign “AMANN. Beyond Threads”**. “Beyond Threads” sums up what makes the company group so strong: AMANN does not just sell sewing and embroidery threads. The real added value lies beyond the product itself, offering tried-and-tested solutions, reliability and genuine partnership. Worldwide.

Just in time for the trade show, the **Sustainability Performance Update 2025** is being published, providing a transparent overview of progress made over the past year in the strategic focus areas of Ecological Awareness, People Matter and Profitability.

With its presence at Texprocess 2026, AMANN is highlighting one thing above all else: new sewing and embroidery threads that specifically address the industry’s technical and sustainability-related requirements.

Visitors can find AMANN from **21 to 24 April 2026** in **Hall 8.0, Booth H47**.

About us

The AMANN Group, headquartered in Bönningheim, is one of the world’s leading manufacturers of high-quality sewing and embroidery threads. Since its foundation in 1854, the company has combined tradition with innovation, working together with its customers to develop forward-looking products and individual solutions for a wide range of applications and industries – including apparel, automotive, technical textiles and work safety. With around 2,800 employees, its own production sites in Europe and Asia, and sales operations in over 100 countries, AMANN has a global presence. Sustainability, quality and technological advancement are at the heart of the company’s business activities.
