

PRESS RELEASE

AMANN launches premium sewing thread for the highest visual standards

Bönnigheim, April 2026 – At Texprocess 2026, AMANN is introducing **Saba evo**, a premium sewing thread designed to produce smoother, higher-quality-looking seams. The specific benefits are immediately apparent: the thread creates a particularly smooth-looking seam, leaves fewer residues during the sewing process and thus improves the appearance of the seam – particularly where visual appeal and processing quality are crucial. In this way, Saba evo addresses an aspect that often determines the overall impression of high-quality products.

Saba evo is a polyester/polyester core spun thread produced using a special Compact Core Spun Technology (CCT). The construction ensures high abrasion resistance and seam uniformity. This gives the finished product a particularly clean, exclusive look. The thread is designed for closing and topstitching seams and is also suitable for elegant embroidery.

Saba evo can be used without any additional adjustments to machines, needles or the sewing process. For users, this means a noticeable improvement in quality without having to change their existing production processes. The new thread thus combines the desired visual improvement with high processing stability and good strength properties.

This product is particularly suitable for applications where the seam is a key visual feature: made-to-measure garments, formalwear, blouses, shirts, suits, high-quality leather goods, leather accessories and elegant embroidery. A uniform seam appearance and clean finish play a key role in determining the perceived value of the product.

“Saba evo stands for exactly the kind of solutions we want to offer: products that make a visible difference in use without unnecessarily complicating processes. With high-quality products in particular, it is often the details that make the difference – exceptionally high visual standards, fewer residues and consistent processing. This is precisely where the added value of Saba evo lies,”

says Christine Bauer, Chief Commercial Officer of the AMANN Group.

AMANN will be showcasing Saba evo from 21 to 24 April 2026 at Texprocess in Frankfurt, Hall 8.0, Booth H47. The product is one of six new innovations the company will be presenting at the trade fair.

About us

The AMANN Group, headquartered in Bönningheim, is one of the world's leading manufacturers of high-quality sewing and embroidery threads. Since its foundation in 1854, the company has combined tradition with innovation, working together with its customers to develop forward-looking products and individual solutions for a wide range of applications and industries – including apparel, automotive, technical textiles and work safety. With around 2,800 employees, its own production sites in Europe and Asia and sales operations in over 100 countries, AMANN has a global presence. Sustainability, quality and technological advancement are at the heart of the company's business activities.
